DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-11, the prior arts of record do not disclose accepting a packet associated with a flow; generating a flow group identifier from the flow; determining whether other packets associated with the flow group are present in a switch fabric; assigning the packet to a path being used by the flow group if other packets associated with the flow group are present in the switch fabric; and assigning the packet to a path using path congestion status information if other packets associated with the flow group are not present in the switch fabric.

Regarding claim 12, the prior arts of record do not disclose accepting a packet associated with a flow; generating a flow group identifier from the flow; storing a first data structure in a switch fabric, the first data structure comprising a first entry the first entry comprising the flow group identifier, an outstanding packet indicator, and a path identifier; and storing a second data structure in the switch fabric, the second data structure comprising a second entry, the second entry comprising the path identifier and path status information, wherein the path status information comprises an indication of whether a path failed and an indication of whether the path is congested.

Regarding claims 15-25, the prior arts of record do not disclose means for accepting a packet associated with a flow; means for generating a flow group identifier from the flow; means for determining whether other packets associated with the flow group are present in a switch fabric; means for assigning the packet to a path being used by the flow group if other packets associated with the flow group are present in the switch fabric; and means for assigning the

packet to a path using path congestion status information if other packets associated with the flow group are not present in the switch fabric.

Regarding claims 26 and 28, the prior arts of record do not disclose assigning an incoming cell to one of the virtual output queues using cell destination information; providing a head-of-line cell of the one of the virtual output queues to one of the virtual path queues using a dynamic hashing scheme; selecting, for a switch plane link, one of a number of virtual path queues having a cell; and sending the cell from the selected one of the number of virtual path queues over the switch plane link.

Regarding claims 29-32, the prior arts of record do not disclose a plurality of virtual output queues for accepting cells based on cell destination information; and a plurality of virtual path queues for accepting head-of-line cells from the plurality of virtual output queues, wherein each of the virtual path queues accepts a head-of line cell from a virtual output queue based on a dynamic hashing scheme.

Regarding claims 33-42, the prior arts of record do not disclose a traffic manager module configured to: generate a flow group identifier from a flow; determine whether other packets associated with the flow group are present in the switch fabric; assign the packet to a path being used by the flow group if other packets associated with the flow group are present in the switch fabric; and assign the packet to a path using path congestion status information if other packets associated with the flow group are not present in the switch fabric.

Conclusion

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
